

Practical 01: Installation & Introduction

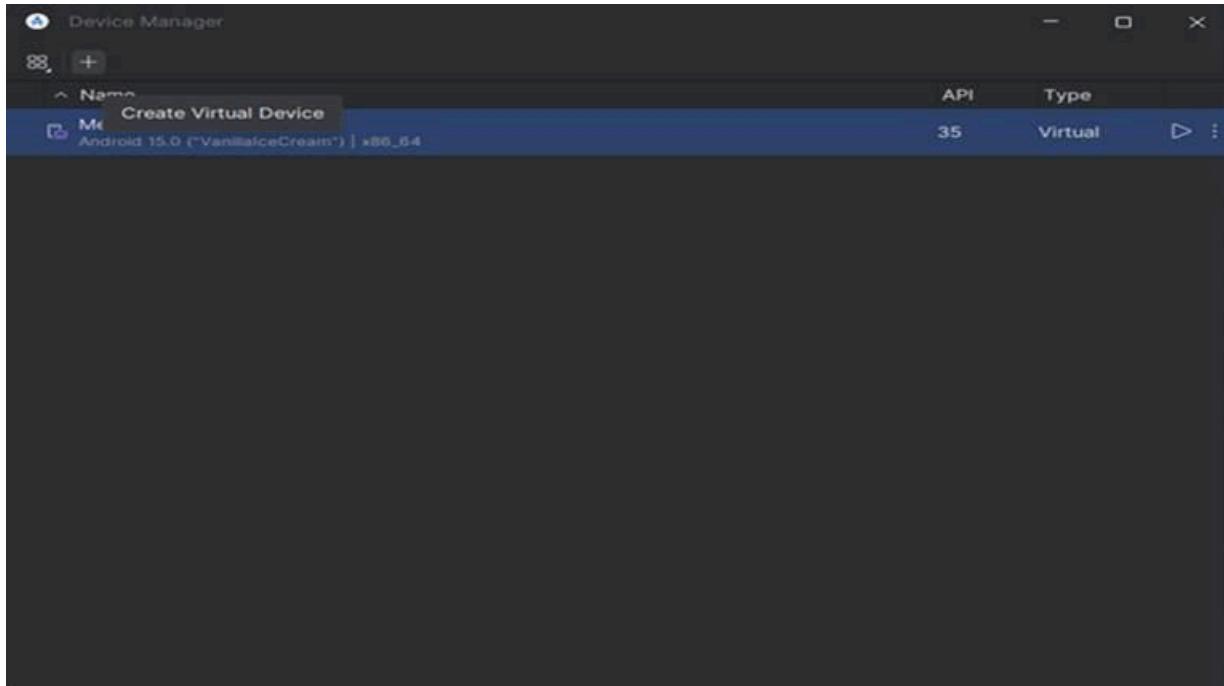

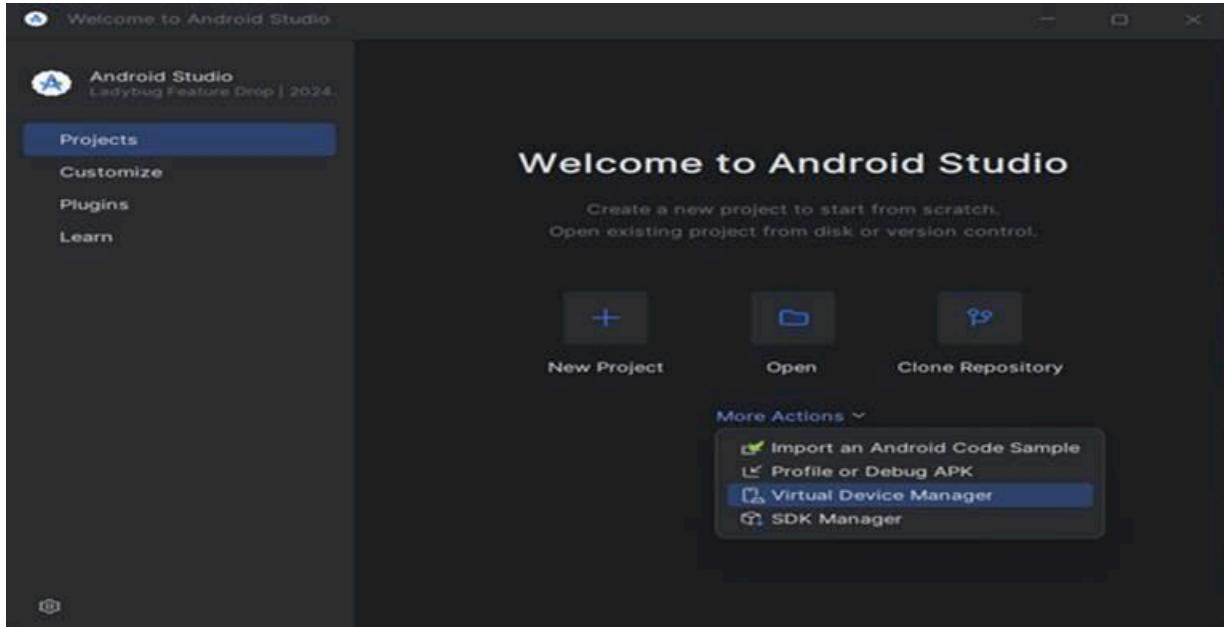

What is Android Architecture?

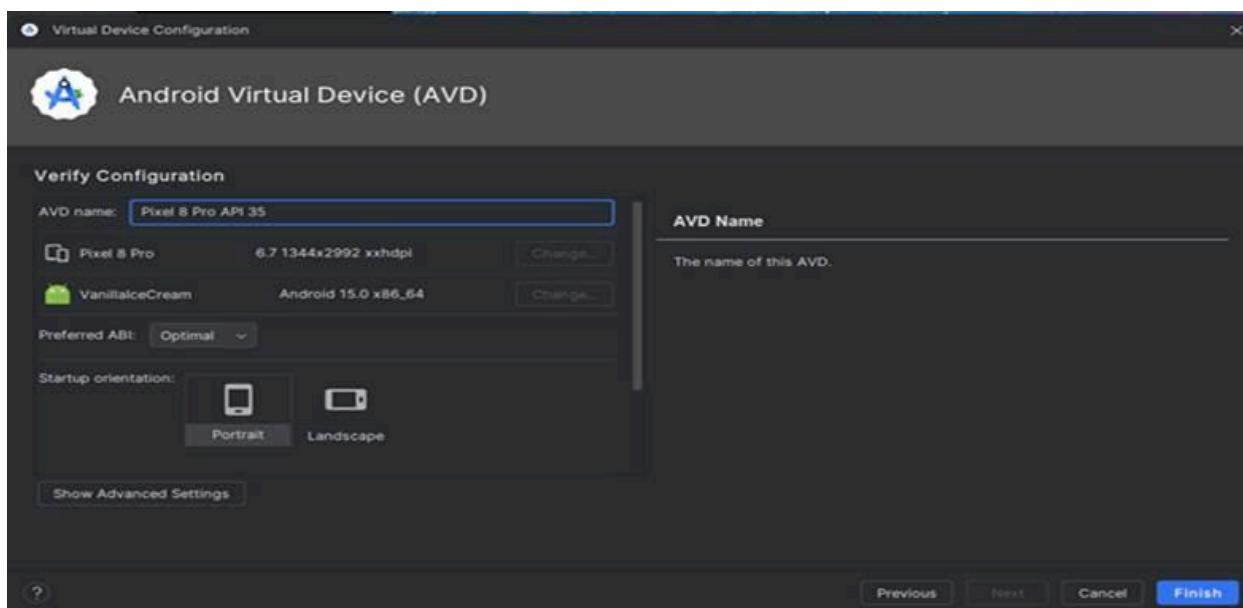

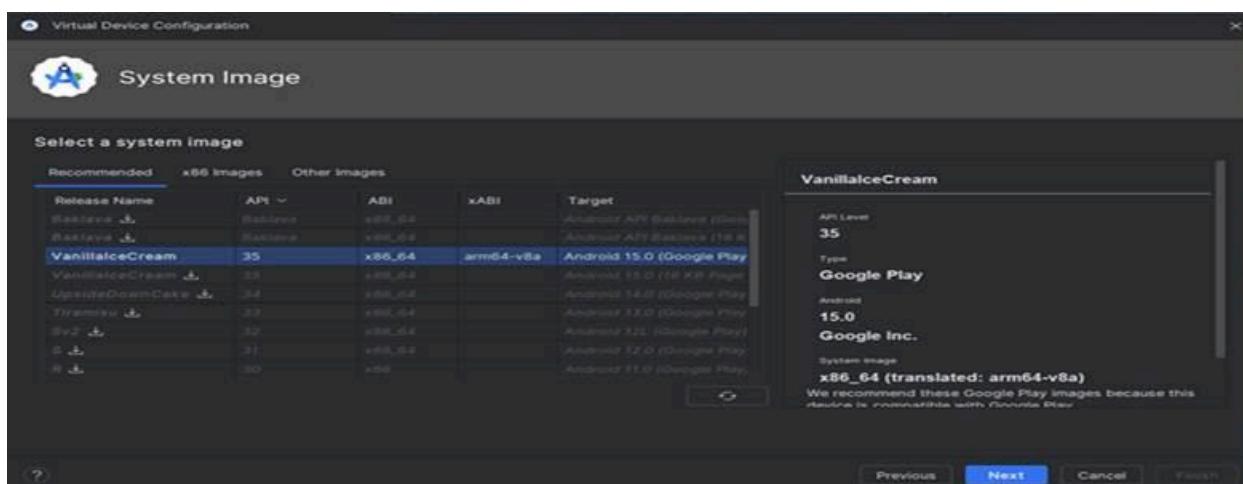

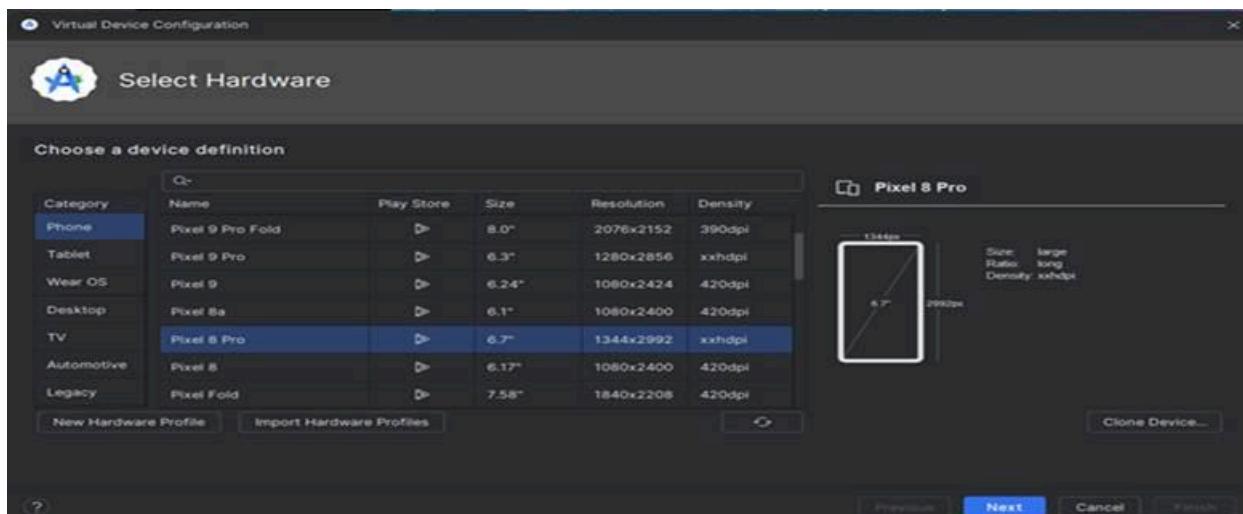

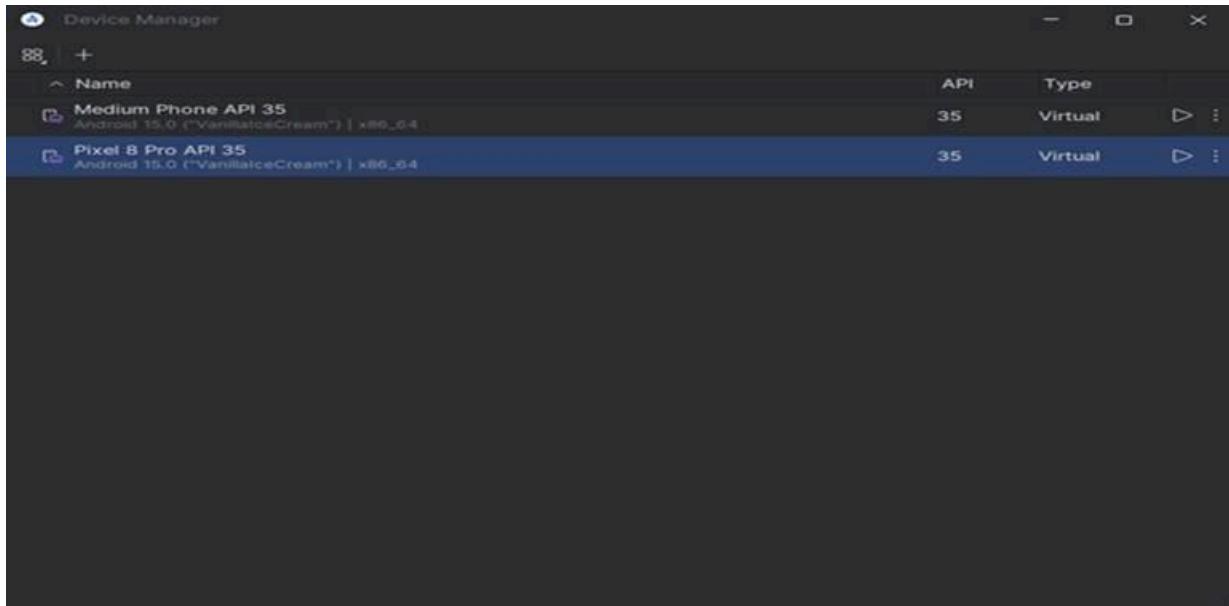

Android Studio Installation:

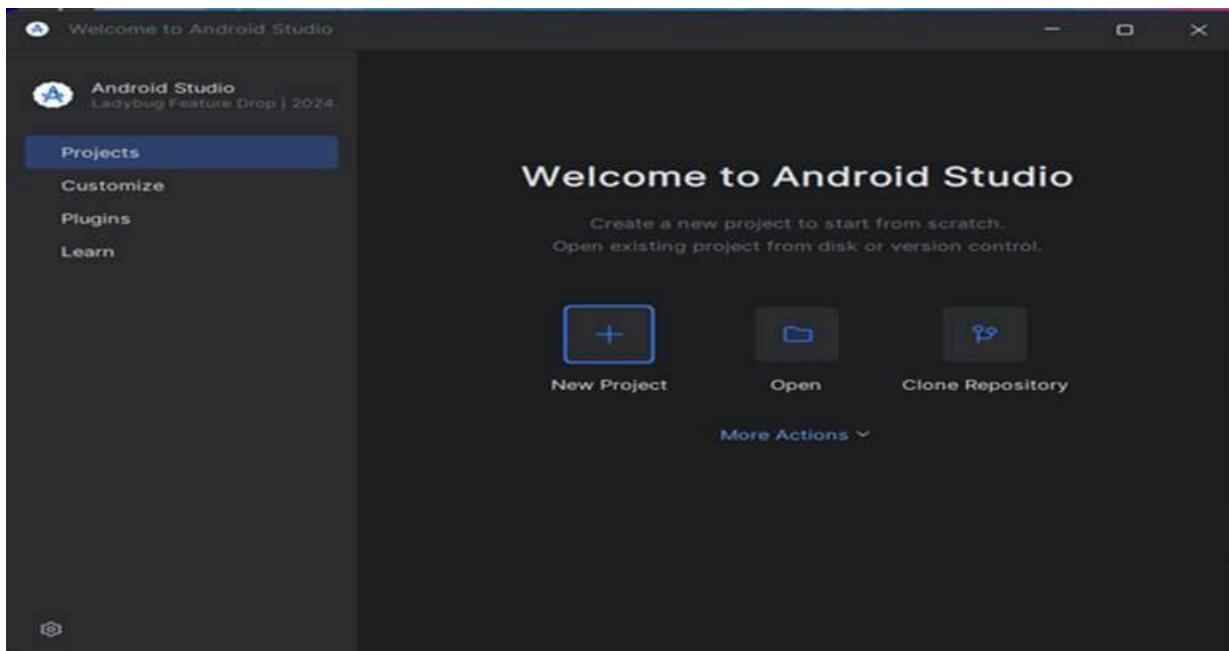

AVD Creation:

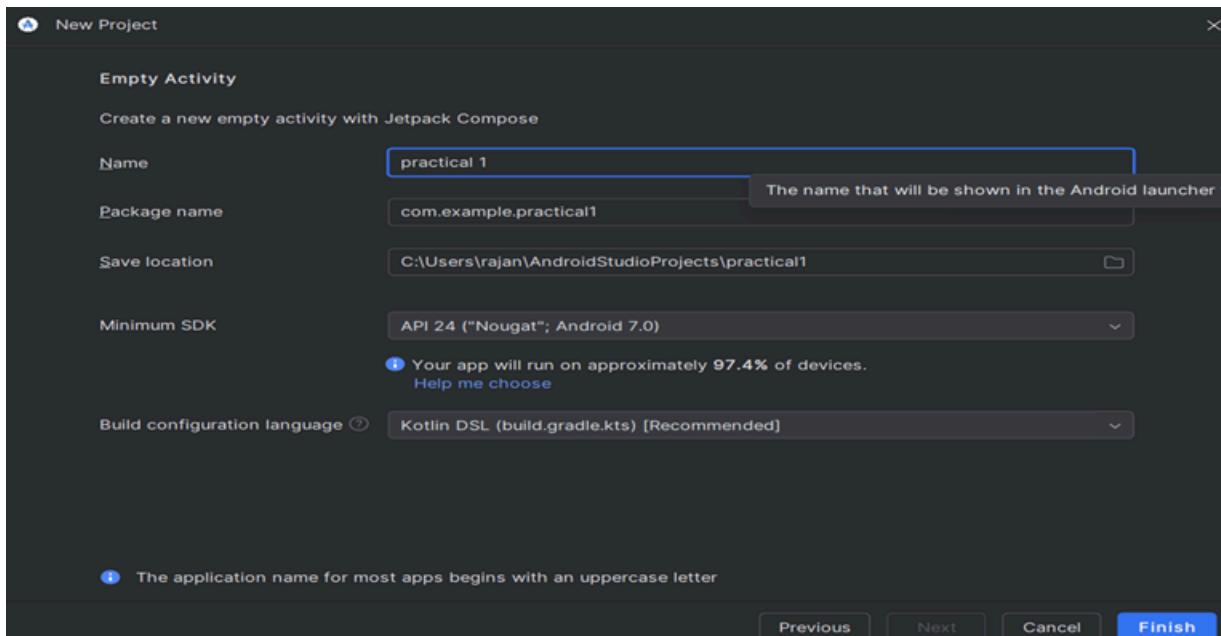

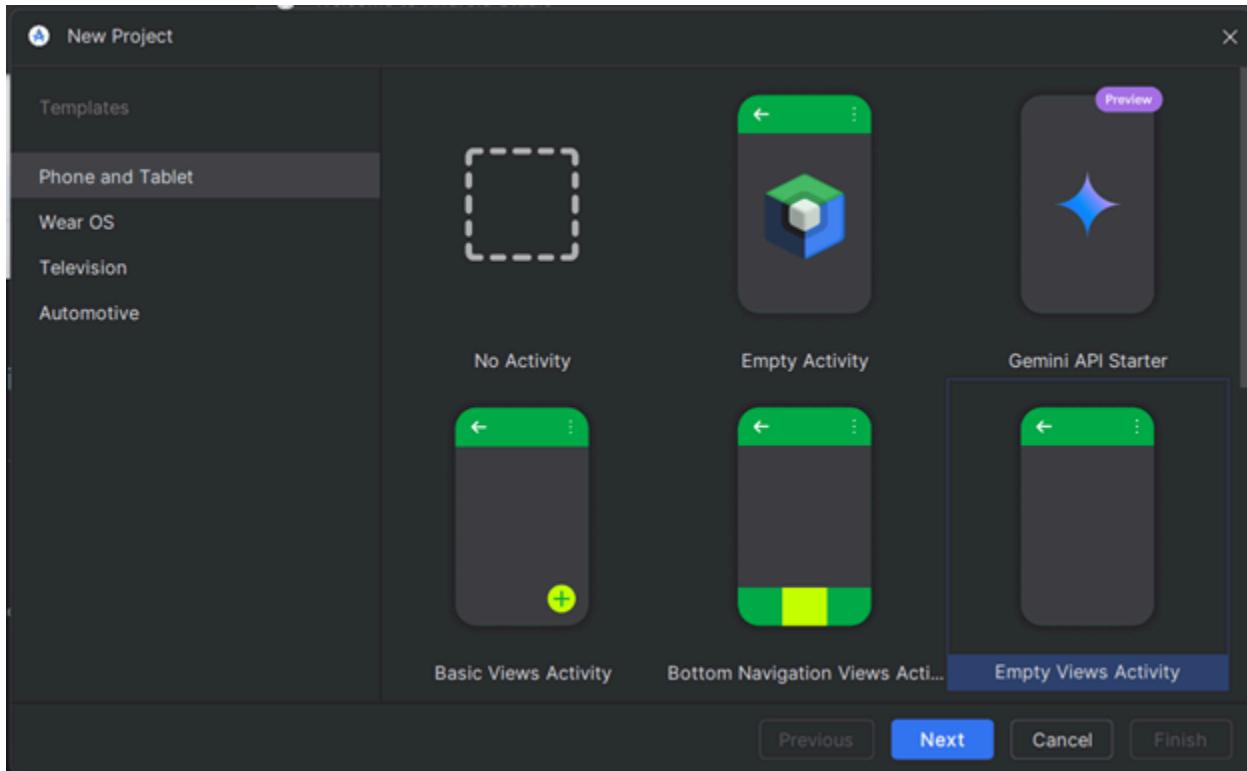

Create a New Project:

Select Empty View Activity

Screenshot of the Android Studio code editor showing the `MainActivity.kt` file. The code defines a `MainActivity` class that overrides `onCreate` and contains a `Greeting` Composable function. A preview window shows the text "Hello RAJAN!". The code editor interface includes tabs for `build.gradle.kts (app)`, `build.gradle.kts (project)`, and `build.gradle.kts (gradle)`. The bottom status bar shows the file path `practical1/app/src/main/java/com/example/practical1/MainActivity.kt` and the line number `36`.

```
package com.example.practical1

import ...

class MainActivity : ComponentActivity() {
    override fun onCreate(savedInstanceState: Bundle?) {
        super.onCreate(savedInstanceState)
        enableEdgeToEdge()
        setContent {
            Practical1Theme {
                Scaffold(modifier = Modifier.fillMaxSize())
                    Greeting(
                        name = "Android",
                        modifier = Modifier.padding(16.dp)
                    )
            }
        }
    }
}

@Preview(showBackground = true)
@Composable
fun GreetingPreview() {
    Practical1Theme {
        Greeting(name = "Android")
    }
}
```

Screenshot of the Android Studio code editor showing the `MainActivity.kt` file. The code is identical to the previous screenshot. A preview window on the right side of the screen displays the output of the `Greeting` Composable function with the text "Hello RAJAN!". The project structure is visible on the left, showing the `gradle` folder and its subfolders like `idea`, `kotlin`, and `app`. The bottom status bar shows the file path `practical1/app/src/main/java/com/example/practical1/MainActivity.kt` and the line number `36`.

```
package com.example.practical1

import ...

class MainActivity : ComponentActivity() {
    override fun onCreate(savedInstanceState: Bundle?) {
        super.onCreate(savedInstanceState)
        enableEdgeToEdge()
        setContent {
            Practical1Theme {
                Scaffold(modifier = Modifier.fillMaxSize())
                    Greeting(
                        name = "Android",
                        modifier = Modifier.padding(16.dp)
                    )
            }
        }
    }
}

@Preview(showBackground = true)
@Composable
fun GreetingPreview() {
    Practical1Theme {
        Greeting(name = "Android")
    }
}
```

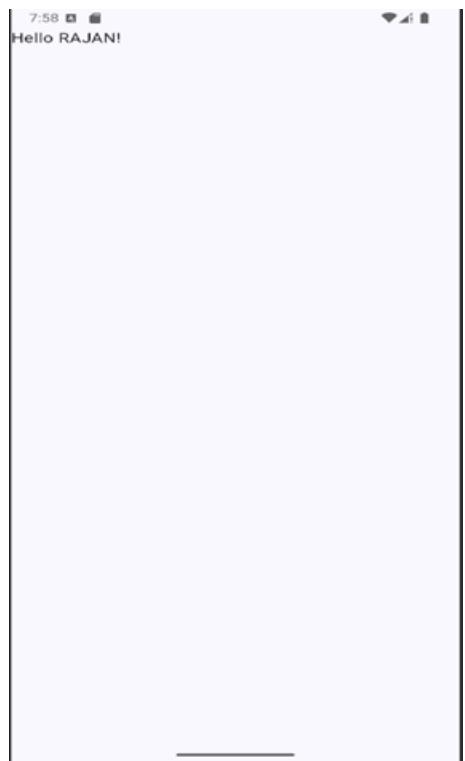

Printing Hello World**activity_main.xml**

```
<?xml version="1.0" encoding="utf-8"?>
<androidx.constraintlayout.widget.ConstraintLayout
    xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:app="http://schemas.android.com/apk/res-auto"
    xmlns:tools="http://schemas.android.com/tools"
        android:id="@+id/main"
        android:layout_width="match_parent"
        android:layout_height="match_parent"
        tools:context=".MainActivity">
<TextView
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"
        android:text="Hello RAJAN!"
    app:layout_constraintBottom_toBottomOf="parent"
    app:layout_constraintEnd_toEndOf="parent"
    app:layout_constraintStart_toStartOf="parent"
    app:layout_constraintTop_toTopOf="parent" />
</androidx.constraintlayout.widget.ConstraintLayout>
```

Practical 2A: Res Folder

Introduction:

In an Android Studio project, the res (resources) folder plays a vital role in storing non-code elements like images, layouts, and string values. These resources enhance the visual design, user experience, and localization of the application. This journal entry provides a detailed step-by-step explanation of the res folder and its subdirectories.

- activity_main.xml
- strings.xml
- colors.xml

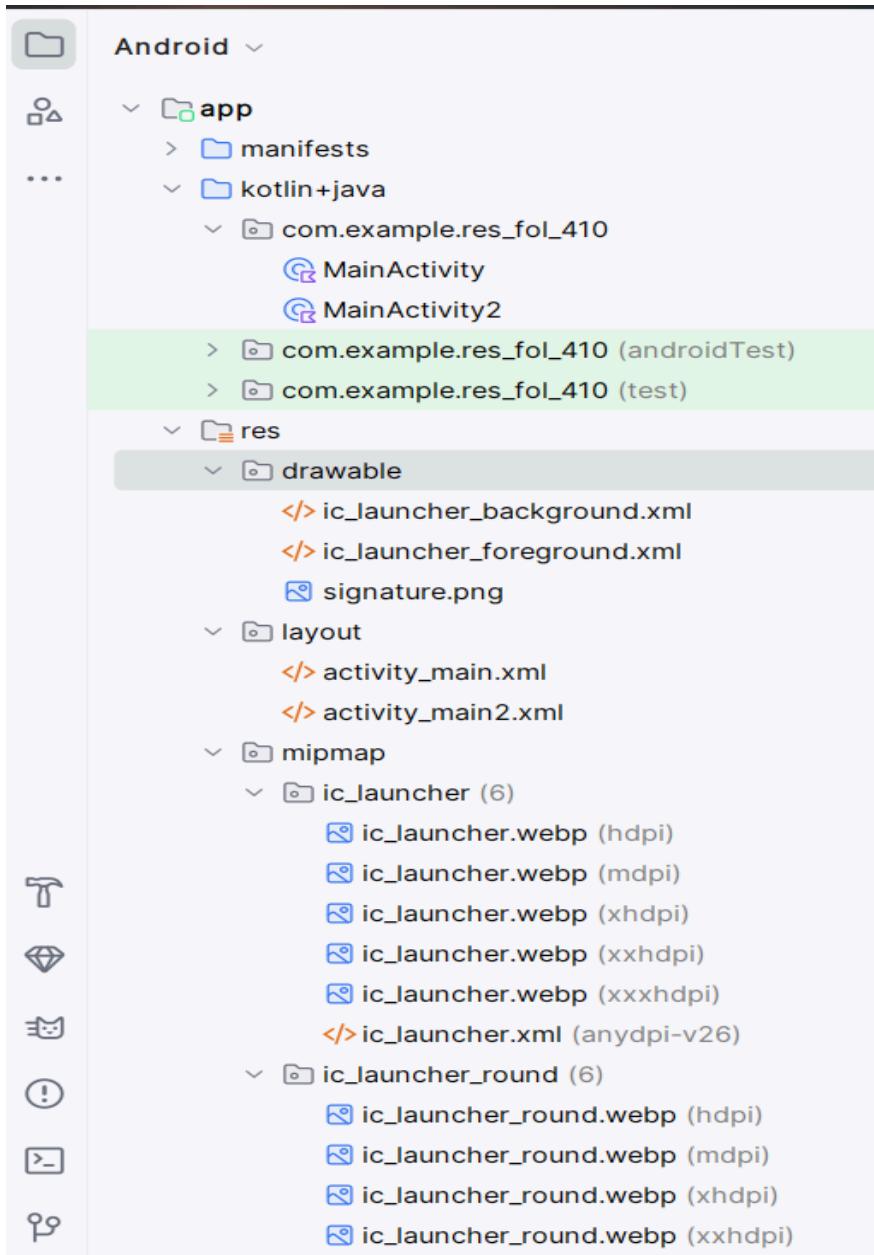

Step-by-Step Explanation of the res Folder: The res folder contains different subdirectories, each with a specific function. These subdirectories store images, XML layouts, menu options, and other essential components used in the Android app. Below is a breakdown of these subdirectories:

1. drawable/ – Images and Drawables - This folder stores image files (PNG, JPEG, SVG) and XML drawable resources. - It is used for icons, background images, and vector graphics. - Example Usage in XML:

2. layout/ – UI Layouts - Contains XML files that define the app's user interface. - Each screen (Activity/Fragment) has a corresponding layout file. - Example (activity_main.xml)

3. mipmap/ – App Icons - Stores different resolutions of the app launcher icon. - Android selects the appropriate resolution for the device. - Common directories: - mipmap-mdpi/ (Medium Density) - mipmap-hdpi/ (High Density) - mipmap-xhdpi/ (Extra High Density) - mipmap-xxhdpi/ (Extra Extra High Density)
4. values/ – Resource Values This folder contains XML files that store various reusable values such as strings, colors, dimensions, and styles.
 - a) strings.xml – Text Values for Localization Stores text-based resources like app names, button texts, and messages. Example (strings.xml): Res Folder Practical Welcome to Android Development! Click Me
 - b) colors.xml –

Color Resources Defines color values used in the app. Example (colors.xml): #6200EE
#03DAC5 #370707 #F46969 5. xml/ – Configuration Files - Stores XML files for application settings, network security, and preferences. - Example: Network security configurations, preference settings.

Activity_main.xml: -

```
<?xml version="1.0" encoding="utf-8"?>

<LinearLayout

    xmlns:android="http://schemas.android.com/apk/res/android"

    android:layout_width="match_parent"
    android:layout_height="match_parent"
    android:orientation="vertical"
    android:gravity="center"
    android:padding="16dp"
    android:id="@+id/main">

    <TextView

        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
